Timeless

Project can be found @ this address

Target Users:

People who seek for inspiration, fictitiously the interaction between the user and the application could be changed a become a camera-based interaction, where as the user walks left to right, the scenery changes too. So we might say this animation might target **artists** who seek ways to involve the audience.

Visual Concepts:

Colors, shapes, Time as a visual concept.

Algorithm:

Features:

This interactive animation asks the user to slide his cursor along the screen width in order to revive the transformation of the sun into the moon. I chose to develop this page, as the introduction of my web portfolio, because I am obsessed with time and the fact that despite human development it still slips out of our control, amazes me. This animation aims to be a paradox, as we easily move through time thanks to the position of your mouse (or sliding your finger across your phone screen), we seem to be able to control "the fourth dimension", while
